Task 4

Heading Match

Tigers

Tiger families
Location of tigers
Overview of tigers,
the present situation of tigers
Variation in Size
Tiger appearance
Habitats of Bengal tigers,
Tiger diet

1. The tiger is a carnivorous animal which means it eats meat. It is the largest member of the cat family, which includes, lions, leopard, house cats and Jaguars.
2. Tigers only naturally live in Asia in countries such as India, China and Siberia.
3. Bengal tigers live in a jungle called the Sundarbans in Bangladesh and West Bengal in India. They are also found in other south-east Asian countries.
4. They have orange fur with black stripes, and a white belly. The black stripes usually reach the white underside. The stripes are used to keep them hidden or camouflaged while hunting. Each tiger has a different pattern of stripes. There are also tigers with different colours. Some are white and can have blue or green eyes.
5. Siberian tigers are the largest. Males can grow to 6 feet long and weigh 50lb. Females are slightly smaller.
6. Tigers eat different kinds of prey, mostly other large mammals. Examples include deer, monkeys, wild pigs and other Asian animals. Some tigers may eat up to 50 pounds of meat a day. Tigers kill their prey by holding down on the prey's throat. This means that the prey cannot breathe.
7. Tigers are becoming very rare because people hunt them for their skin. There are only 3,500 Bengal tigers in the wild, and there are only 20 or 30 South-Chinese tigers remaining.
